PROJECTS

Portfolio • HTML | CSS | React
My portfolio is regularly being updated with new programming skills as they are acquired. Follow the link below in order to view more information on current and past projects.
www.christopherglenbaker.dev

Farmers Market Place • Ruby on Rails | postgres
A web application that allows users to buy and sell farm fresh produce. Created to help locals connect with farmers producing high-quality food, beneftting both the consumer and the farmer. Main concepts developed during this project included how web pages communicate data between MVC's and routing between pages in order to obtain, update or delete information.

Stock Trader • Ruby
A terminal application which allows users to create a profile and trade stocks in real time. A personal favourite because it required me to learn Ruby, Ruby Gems, API Calls and json in order to develop various methods to access and utilise data, allowing for feedback to the user about their investment portfolio.

LEADERSHIP

President • Queensland Lacrosse Association
Jan 2020 – Current

Elected by my peers, because I showed a strong ability to bring teams together, demonstrated a vision for the future of Queensland Lacrosse and a clear plan to get results. Since becoming President, our organization has increased communication from the state board to associated clubs, pivoted recruitment direction by creating the university model and will host the only nationally recognized, interstate lacrosse tournament in 2021.
